

Asset question Type on Electronic Forms

One of the question types available when designing an electronic form is the Asset question.

Once selected from the Question Type dropdown you can then configure what the end user can do and see.

The screenshot shows a 'Form Questions' table with the following columns: Question Name, Question Type, Is Required?, Order, Default, Section, and Tag. The 'Question Type' dropdown menu is open for the first row, showing options: Not Selected, Asset, Calculated Field, Date, DateTime, Decimal, DisplayText, and TextBox. The 'Asset' option is highlighted with a red box. The table contains five rows of questions.

Question Name	Question Type	Is Required?	Order	Default	Section	Tag
Select asset	Not Selected	<input type="checkbox"/>	0		Not Selected	
Photo	Asset	<input checked="" type="checkbox"/>	1	n/a	Main	
Question 1	Calculated Field	<input type="checkbox"/>	2	n/a	Main	
Question 2	Date	<input type="checkbox"/>	3	n/a	Main	
	DateTime	<input type="checkbox"/>	4	n/a	Main	

Clicking the pencil icon beside the question type will reveal a pop up where you edit these settings.

 Help

This asset question type lets the user choose existing assets either from asset dropdowns or by scanning the QR code. The user can also add new assets from here. Choose which of these options you want to include.

You can also restrict the assets to an asset class.

This Asset question type is available on the main application, Manager & Resource Apps.
