

# Is the Software available in different languages?

Yes, a default language will be set when the Client is created but once a user logs in he/she can navigate to the menu in the top right of the screen as seen below and change their language.

A user with Full Access to the system can also manage language settings for each User or UserType.

This can be done in:

Settings → Users → General Settings → Display Settings

or

Settings → UserTypes → General Settings → Display Settings

## Display Settings
