

QR Codes

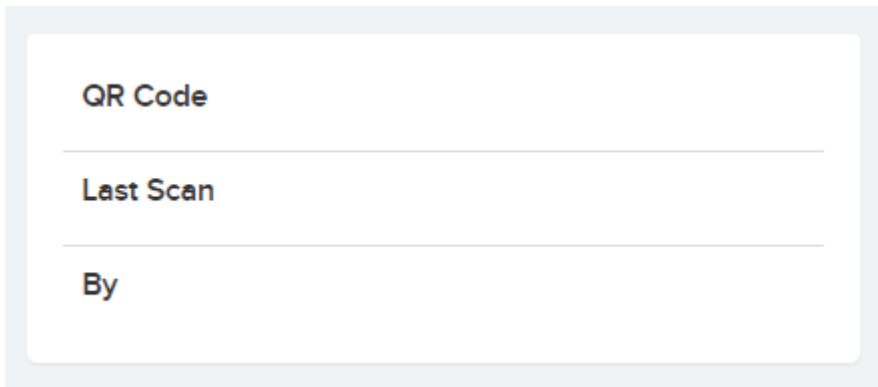

Within Trackplan you have the option to attach QR codes to Assets, Sites, Locations, Sub Locations or even a Job so when the Job task is emailed to the contractor or sent down to the Resource App or Contractors Portal the QR code will be available to scan. Scanning the QR code when the Contractor arrives on site will start the task and scanning when he/she leaves will end the task. For Assets, Sites and Locations these QR Codes can be printed out and attached to the physical asset or location. This enables the user to scan the code with their phone when completing a job for a particular asset or location. The screenshots below show how the QR code can be added to an asset and printed.

QR Codes can be created on the Asset Details page:

Asset Details

On the Asset Details page, there is a section which shows the option for a QR Code for this asset:

QR Code

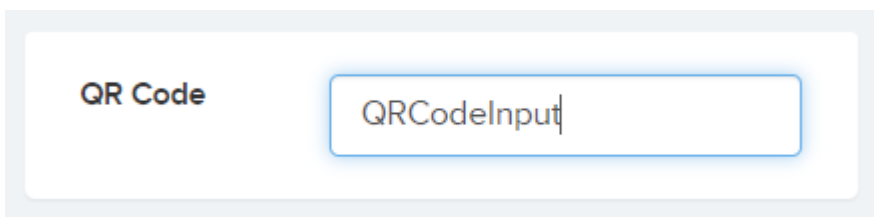

Last Scan

By

To create a QR Code, simply click on the *Edit Asset* button:

This will enable you to input a string of letters / numbers:

QR Code

QRCodeInput

When you are ready, click the *Save* button:

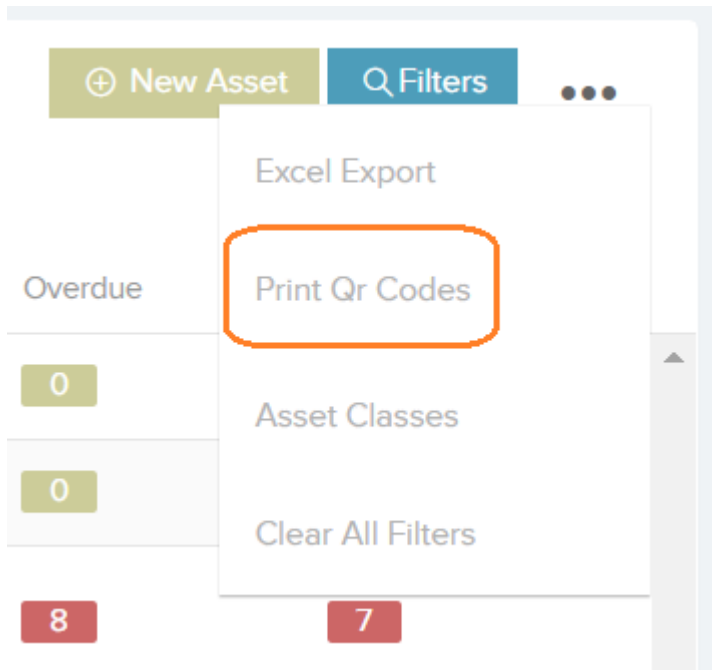

Once you have saved, you will see that a QR Code has been generated from the previous input:

QR Code	QRCodeInput
Last Scan	
By	
	

Once a QR Code has been generated, it can be printed out, attached to the asset itself, and scanned by users completing jobs. In the above image, we can see “Last Scan” displayed; every time a QR Code created in Trackplan has been scanned, it is logged in the main application.

A full list of QR Codes can be generated by selecting the three dots on the main Assets List view, and then selecting *Print QR Codes*:

This will open a new page with all QR Codes currently attached to existing assets. On this page there is a button labelled *Download PDF* which will download this list in a PDF format when can then be used for printing:
